

34
8. (twice amended) The method of claim 6, wherein,
[depending on the separation system,] the detection is
carried out by means chosen from the group consisting of
ethidium bromide staining, silver staining, radiographic
labeling followed by autoradiography [or by means of] and
automatic sequencing equipment using dye- or fluorescence-
labeled primers.

Please the following claims:

34
11. The set of claim 1, wherein the pairs of primers
comprise all of the 233 primer pairs.

REMARKS

This is in response to the official action dated
September 24, 1999. Reconsideration in view of the
following is respectfully requested.

The examiner objects to the page numbering as not
being consecutive. Applicant submits that the page

numbering is consecutive, but understands that some confusion may have arisen from the presence of a listing of the 233 primer base pairs in the specification (pages 4-12) and as part of claim 5 (pages 18-26). The listing on pages 18-26 was meant to be included in as part of claim 5; however, this entire listing is now canceled by the deletion of claim 5. The listing in the specification is substituted by a listing which now includes the SEQ ID NOS, and claims 1 and 6 are amended in this manner as well.

An abstract is added.

The examiner objects to use of the term "Tribus Triticae". This is clarified as the "tribe Triticeae" in the specification and claims. It is submitted that 'tribe' is an accepted taxonomical classification (below a subfamily; and above a genus) (see attachment "B", Merriam-Webster Dictionary). Furthermore, Triticeae is a known name for a tribe of plants, which includes several species, among them being *Triticeae aestivum* (see attachment "C", "Genera of the Triticeae as recognized by various taxonomists after 1930", Wheat Genetics Resource Center, Kansas State University, 24 August 1999).

Claims 1 and 6 have been substantially revised to address the examiner's concerns under section 112.

Furthermore, the limitations of claim 5 have been substantially incorporated into claim 1. It is noted that the omnibus rejection to claim 5 does not appear to be proper, as the examiner should have included the listing on pages 18-26 forming a part thereof. In any event, as specific primer pairs are set forth, the claim is not omnibus.

For claim 4, the sequences may mutate in random fashion, so as to result in lengths differing from each other (polymorphism). However, as the lengths of the individual sequences are known, and marked by primer pairs, they may be identified as mutations. There is no need to establish a pattern.

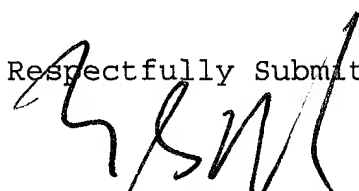

The claims stand rejected as being anticipated by the prior publication of Roder, under section 102. However, claims 1 and 6 as amended recite 233 specific primer pairs not taught or contemplated by this article. Roder teaches 15 pairs, but these are not included in the claims. Therefore, none of the claims are anticipated.

Furthermore, the article states (p. 332) that there is a major limitation regarding large-scale development of microsatellite markers in wheat. Therefore, the fact that the inventors have discovered the 233 pairs (and

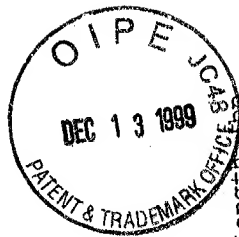

corresponding number of markers) is surprising in view of this earlier prediction. Thus, the claims are not obvious.

Wherefore, allowance of all claims is earnestly solicited.

Respectfully Submitted,

Bruce S. Londa (33,531)
